Sharify front-end documentation

Project repository is located on [GitHub](#).

Used tools

Intellij IDE, TomCat 10 or alternative software are required for the project (initiation).

HTML page is built based on Bootstrap framework.

Structure

The project assumes the following file structure:

- Working files are located in the folder named `static/css` and `static/templates`, any changes are required to take place only in these folders. Before making change of any kind, you must recall, that it will affect web-site performance.
- `html` files are stored directly in a folder named `static/templates`, the related files such as `.css`, `.js` `.jpg` `.png` etc. are stored in a folder named `static/src/`;

Images

- All images are stored in a folder named `static/images`

CSS Structure

All working files are stored in a folder named `resources/static/css`.

- The main file with the list of styles is stored in `resources/css/bootstrap-custom.css`;
- The list of adaptive design styles is stored in `resources/css/responsive.css`;
- Additional interface styles are stored in the file called `resources/css/uikit.css`.

For more convenient navigation around `.css` files, use sourcemap:

```
body {                          bootstrap-custom.css:74
☑ font-family: Roboto, "Helvetica Neue", Arial, sans-
```

JS Structure

All js working files are stored in the folder named `resources/static/js`.

- JavaScript Framework is stored in `resources/js/jquery-2.0.0.min.js`;
- The Main JavaScript file is stored in `resources/js/bootstrap.bundle.min.js`;
- Additional JavaScripts files are stored in `resources/js/scripts.js`.

Fonts

The fonts are stored in the directory `static/fonts`. Fonts are connected using `@font-face` directive.
